

Instructions Trainee Program: Device Registration

1. Open the *Device_Registration_app.exe*.
2. Select the type of the device you want to register (**Water meter**, **Electrical meter** or **Gateway**) and press the *Ok* button.
3. In the new window displayed, enter the parameters of the device you want to register with the correct format:
 - **ID**: A number with 4 digits.
 - **Serial number**: A combination of 6 digits or letters.
 - **Trademark**: Select one of the options in the drop down list.
 - **Model**: Select one of the options in the drop down list.

The following parameters are only available for the *Gateway* device:

- **IP**: A number with 12 digits (written without '.' between them.)
 - **Port**: Select one of the options in the drop down list.
4. After the parameters are correctly entered, press the *Ok* button to complete the registration. After that, a message will be displayed informing if the registration was successful or not.
 5. The data of the device registered is saved in a file created in the "Database" folder, in the same directory where the *Device_Registration_app.exe* is located.
